 - Rebalancing: maintaining the appropriate asset allocation maintaining target manager allocations.
 - Other cash management rebalancing support

POSITION DESCRIPTION: CONSULTING ANALYST

Responsibilities

Consulting Analysts are responsible for generating client reports, preparing client deliverables and participating in due diligence meetings with investment managers. Analysts are a critical part of our Consulting staff, and they directly support the Consultants who then present completed projects and reports to clients. The Analyst position offers the potential for additional responsibilities, which can include making presentations to clients and completing research assignments for presentation to the firm's Investment Policy Committee.

Successful candidates should demonstrate the ability to work equally effectively on their own and as part of a team. They must also have strong time management skills, as the position requires the ability to juggle multiple projects with competing deadlines. Candidates should be self-motivated and seek to enhance client deliverables on an ongoing basis.

Educational and Professional Requirements

- Relevant Bachelor's degree with preference for an advanced degree with 3-5 years of work-related experience
- Chartered Financial Analyst (CFA®) designation or active participation towards completion
- Computer proficiency and the ability to learn proprietary systems
- Strong written and verbal communication skills
